

EESHA SUTARIA

eesha.sutaria@princeton.edu | [LinkedIn](#) | [Github](#) | [Portfolio](#)

SUMMARY

Electrical & Computer Engineering student at Princeton University building full-stack and AI-integrated software across web, mobile, and embedded systems. Experienced shipping production software, translating stakeholder needs into technical solutions, and building AI-powered products across healthcare, accessibility, and enterprise applications.

EDUCATION

Princeton University

Princeton, NJ

B.S.E. Electrical & Computer Engineering, GPA: 3.56

Aug. 2025 – May 2029 (Expected)

- **Minors:** Statistics & Machine Learning, Optimization & Quantitative Decision Science, Entrepreneurship
- **Relevant Coursework:** Multivariable Calculus, Linear Algebra, Probability, Information Signals (MATLAB), Contemporary Logic Design, Computer Science (Java - object-oriented), Intro to Programming Systems (C)
- **Activities:** SWE Career Dev. Chair, PUMP Mentor, Tigertales Partnerships PM, NAACHO Dance Team Choreographer

EXPERIENCE

Service Design & Digital Health Product Intern | Western Cape Department of Health & Wellness

Jun. – Jul. 2026

- Built a patient attendance tracking application in **Microsoft Power Apps** with **SharePoint Lists** as the backend, applying core data modeling and workflow logic to support a public system serving **5M+ residents**
- Authored technical documentation, implementation guides, and training manuals for the **0→1 launch** of a pilot patient rewards program (2,000 participants), working directly with clinic stakeholders to refine requirements
- Drove **stakeholder alignment** by meeting directly with experts to translate operational needs into requirements, refining incentive structure and **KPIs** based on feedback to maximize program adoption and success

Data & Artificial Intelligence Intern | PlayMaker Startup

Jan. 2026

- Built an **AI-powered pricing pipeline** integrating the **Gemini LLM API** with **Firebase** to analyze over **1,000 records** in **Python**, automating valuation across 100+ inventory items
- Applied **prompt engineering** to enable Gemini to surface patterns in historical pricing data, improving the accuracy of the valuation model, thus implementing an AI-solution for a real-world platform
- Delivered **data-driven pricing optimization and cost forecasting**, replacing manual estimation with automated recommendations and cutting turnaround time

Software Engineering Intern | Jamf

May – Aug. 2025

- Developed, tested, and validated API security features for Jamf School's MDM platform (28K+ schools globally) by integrating audit service logging and authoring PACT contract tests, reducing vulnerabilities and regression risk
- Designed, implemented, tested, and debugged software features as part of an agile scrum team using Git, AWS, and Kotlin, coordinating sprint planning and cross-functional ticket resolution on schedule

Firmware Automation Intern | Axon

Jan. – May 2024

- Built a **Python** tool aggregating file metadata across **Arena PLM** into a single searchable spreadsheet, automating a manual lookup process across product lines

PROJECTS

S.A.R.A.H. | Python, Gemini VLM API | [demo](#)

- Independently designed and built a computer vision hazard detector and voice assistant attachment for white canes, enabling real-time obstacle detection for visually impaired users without a sighted guide

Synova | Python, Kotlin, FastAPI, Whisper, React | [demo](#)

- Built a real-time Parkinson's gait assistance pipeline using adaptive digital signal processing and IMU sensor fusion to isolate tremor, delivering spatial audio cues designed to support gait initiation during freezing-of-gait episodes
- Developed a dysarthric speech clarification system normalizing degraded ASR output into usable phrases, improving communication access for Parkinson's patients

SenseAI | React, JavaScript, Gemini API, OpenAI | [demo](#)

- Consolidated sentiment analytics, live call emotion detection, KPI dashboards, and AI-generated coaching into a unified B2B SaaS platform for customer service teams

TECHNICAL SKILLS

Programming Languages (Object-oriented): Python, Java, Kotlin, C, JavaScript, MATLAB, HTML/CSS

Frameworks/Technology: React, FastAPI, Firebase, Supabase, AWS, Git, Linux, Jira, Android Studio, GitHub Copilot, Claude Code, SharePoint, Power Apps, Microsoft Roo Code

Software Engineering/AI: Gemini VLM, OpenAI API, PyTorch, Whisper ASR, TensorFlow, computer vision, signal processing, Object-Oriented Programming, Algorithms, Data Structures, REST APIs, Agile/Scrum, Software Testing, Debugging, scikit-learn, Machine Learning

Certifications: GIAC Foundation Cybersecurity Technology (GFACT) | Global Seal of Biliteracy – Spanish

AWARDS & HONORS

2025 U.S. Presidential Scholar – Selected as 1 of 161 seniors nationwide for outstanding academic and leadership achievement
NCWIT National Honorable Mention & AZ Affiliate Winner (2024) – Recognized for exceptional aptitude and impact in technology and computing

Congressional Award, Bronze Medal (2024) – Awarded for excellence in voluntary public service, personal development, and civic engagement
